

NEXTCLOUD

Web Application NEXTtec control panels remote control

Visit cloud.nexttec.it

Compatible with new generation browsers

Desktop and Mobile.

Full compatible with Google Chrome and Mozilla Firefox*

*Make sure you have the latest updated version of your favorite browser.

Simply visit cloud.nexttec.it

It's possible to launch from device the web application as a native App.

On the browser setting request that the site would be seen on the home screen.

It will be created an icon that permits a fast access to web application

For Safari: Reach the login page and by clicking Safari Share button in the tools bar is possible to add to home the web application.

Access to Nextcloud

Request to your installer an account writing to support@nexttec.it

The installer account is necessary to create user accounts and to associate the NEXTtec control panels to the accounts.

With an user account it's possible to manage unlimited number of control panels.

A screenshot of the NextCloud sign-in interface. At the top, it says "NextCloud - Sign In". Below this is the NextCloud logo, a blue hexagon with a white cloud. Under the logo are two input fields: "Email" with an envelope icon and "Password" with a lock icon. Below these fields is a blue "Sign In" button. At the bottom, there is a checkbox labeled "Stay signed in".

NextCloud - Sign In

Sign In

☐ Stay signed in

By enabling «Stay signed in» the session remains valid until logout.

User Settings

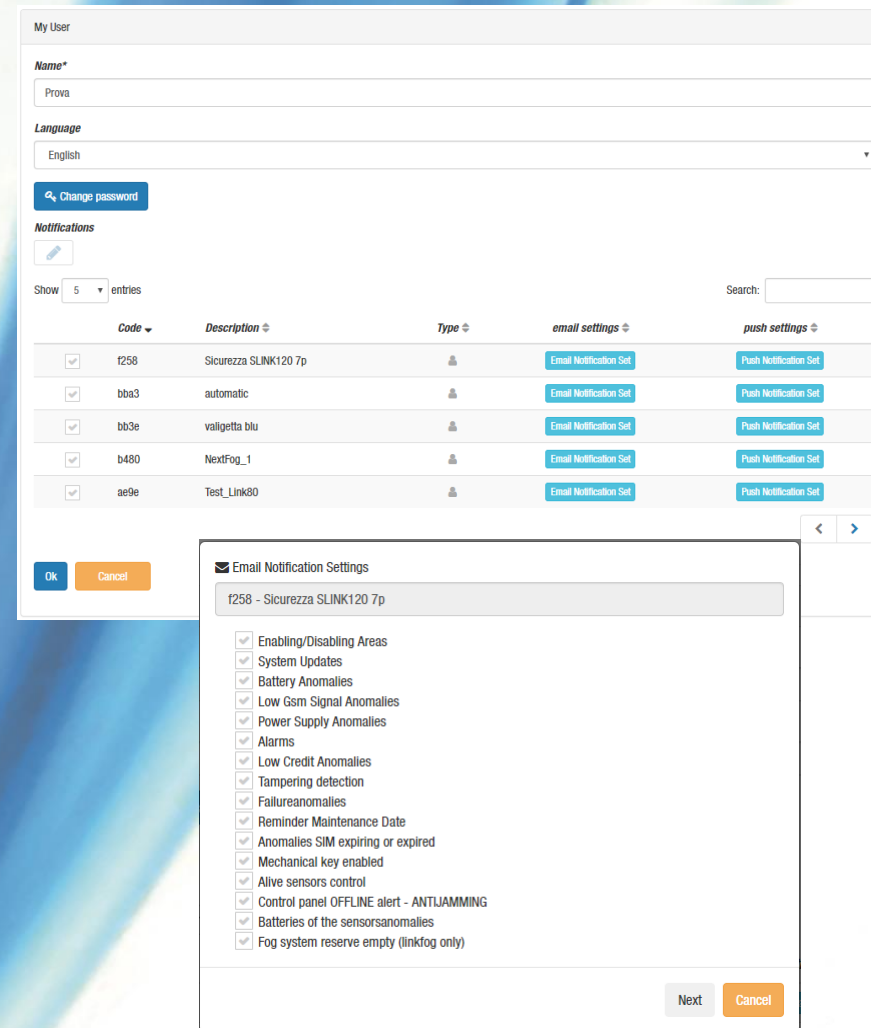

User menu functions:

- Change password. 
- Change language or user name
- Setting which email notifications the system will send to user, for each control panel associated:

Select a control panel and click to modify

Then, Select the notices in order to activate them and click to Ok to confirm.

The screenshot shows the 'My User' settings page. It includes a 'Name*' field with the value 'Prova', a 'Language' dropdown set to 'English', and a 'Change password' button. Below these is a 'Notifications' section with a 'Show' dropdown set to '5' and a search bar. A table lists five control panels with their codes, descriptions, types, and notification settings. The 'Email Notification Settings' dialog is open for the first entry, showing a list of notification types with checkboxes.

Notifications

It's possible to set up the system in order to send notices about events in progress.

Sending notice through e-mail or Push service.

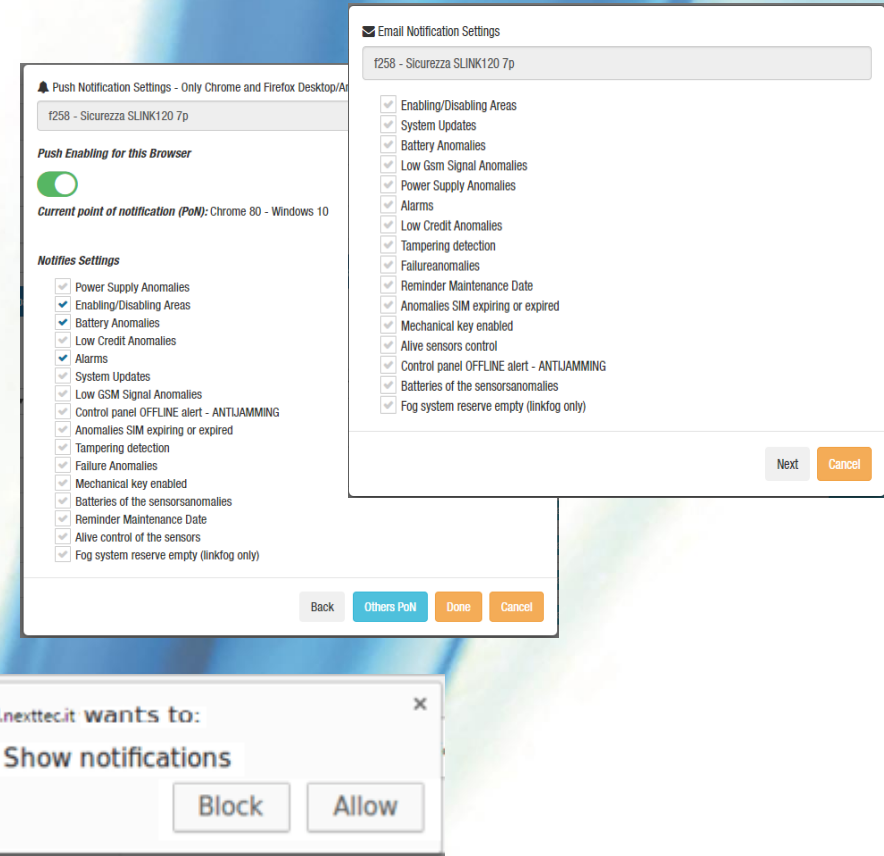

At the moment it's possible activate Web Push Notice only on Mozilla Firefox Desktop e Mobile Android.

Push Service is available on LinkCloud iOS.

Sending notices through browser, activating by the switch control and agree to subscription request submit after that.

It's possible manage up to 3 browser as point of notification.

Through other PoN button is possible to cancel the Point of Notification, while to delete to current browser it's sufficient through the switch control

Through control panels menu is possible:

- Visualize all control panel matched and filter based on name or description
- Personalize the control panel description: (default automatic name)
- If the control panel communicates correctly with the cloud, the visibility customization function of the commands will be made available: ON / OFF, Inputs and Outputs, so as to hide the commands that cannot be used because they are not programmed on the control unit.

Commands Customization

Areas Visibility - List of the hidden areas

Select the areas with the icon above the text box

Inputs Visibility - List of the hidden inputs

Select the inputs with the icon above the text box

Outputs Visibility - List of the hidden outputs

Select the outputs with the icon above the text box

Scenarios Visibility - List of the hidden scenarios

Select the scenarios with the icon above the text box

Select Inputs to hide

 Grey button = element invisible - Light blue button = element visible

Inputs

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
16	17	18	19	20	21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40	41	42	43		

Select the element to hide. It will be shown in gray once hidden. It is possible to use the "Hide without custom text" mode if the customized texts by the installer have been uploaded to the cloud or if the text has been customized from the corresponding command screens (See following pages).

It is also possible to hide the icons on the technical inputs shown in the screens: System Status and Plants using the controls in the "Hide Installations flags" section.

Waiting time for the control Panel

On / Off

Panel: 1000

In System Status screen ON/OFF, Input/Output is possible to view the info received from the selected control panel.

The waiting time depends on the kind of connection setted on the control panel.

PS: In the case of absence of connection do logout and again login

Stop lights scenario

Note: This function is available only for Superlink series control panels.

CCTV Remote Control

On Remote control CCTV screen is possible to configure NextCloud to request 10 snapshots from a CCTV system when an alarm is detected.

The following CCTV Brands are supported: Dahua, Hikvision, Hyundai, ProvisionSR, Mobotix

The following settings are required:

- Public/DNS or o DDNS IP Address configurated to CCTV system and HTTP Port (Nedeed port Forwarding/NAT on router of CCTV system net)
- Connection type HTTP/HTTPS based on CCTV system settings.
- CCTV System Credentials: for more security it is raccomandanded that not use Admin account and limit the access only to interested camera
- Authentication through digest if required drom the CCTV System.

Through this button  is possible match to CCTV System an input to monitor.

It's possible choose if save snapshots on NextCloud and/or attach them to the alarm email notifications (if enabled by the user).

Panel: 4913

Icons Legend

Shoot Control

i The fogging system is not ready

The fogging system is ready for an emergency manual shot. By clicking on the button is possible to shoot. It will be required to insert a qualified key code.

The fogging system is not ready to shoot. Wait until it will return ready.

A shoot command has been sent from the control panel to the fogging system. Wait until the fogging system will return ready.

historical

1000 - automatic
Manage this control panel

Historical screen shows the historical status of control panel sent to CLOUD

Historical

Panel: 3297 (274 events)

Start Date:

End Date:

Events Filter ▾

[21/2/2020 - 3:59:21] - Status Received

[20/2/2020 - 15:59:13] - Disabling Areas Received. Action performed by the key code: Chiave 01

[18/2/2020 - 18:54:17] - Alarm Received

[20/2/2020 - 15:58:34] - Enabling Areas Received. Action performed by the key code: Chiave 01

Primo Precedente 1 Avanti Ultimo

It shows all received and analysed events of NEXTCLOUD server, highlighting:

- Received alarm.
- System anomaly signed.
- Programs activated/deactivated (based on control panel firmware version indicating also the description of key code used)

By clicking on status panels is possible to know the total program status, also inputs and outputs at recordered time

It keeps a record of all sent commands from cloud to control panel

- Indicating what kind of operation made
- Indicating the operations made by user 
- Indicating the control panel receiving of commands carried out <<sent command>>

It's possible to filter the historical according to selected time or kind of event.

PS.: limit number of recording events. Available storage up to a week before.
